

Features

- Fast metal removal process
- Easy to control
- Low equipment cost
- Economical to operate
- Easy to operate
- Compact gun
- Cuts cleanly
- Versatile process

Benefits

- Five times faster than flame cutting. Gouges a 9,5mm groove at over 600mm/min.
- Removes defects with precision. Depth of cut is easily regulated, and welding slag does not deflect or hamper the cutting action.
- No gas cylinders or regulators required, except in field operations.
- The welder/operator may do the gouging or cutting.
- The gouging gun contains an air-controls valve and rotating Nozzle permitting change of electrode angle to suit the job while maintaining air jet direction.
- Gouging gun is not much larger than heavy duty electrode holder.
- Post cut surface is clean and smooth.
- May be used in restricted work locations. Requires no difficult adjustments for use on different materials.
